ROOFING PROJECT PROFILE

Chiquita Banana Fort Lauderdale, FL

PROJECT:

The Chiquita Banana roof currently has a modified granule over a metal deck.

CHALLENGES:

The existing roof was 10+ years old and was in fair condition, however, it had several areas which had leaks and had a large amount of granule loss.

SOLUTIONS:

The system used was APOC 583,585 & 515 – 850SQ. This was the contractor's first time using APOC Silicone and both he and his project manager were both very impressed by the performance of our APOC 583, 585 & 515. The APOC® team worked alongside with the Advanced Roofing during the whole process. We were able to repair open seams and flashings with APOC 483 Polyester/ APOC 585 and APOC 515. The contractor described the coating as very easy to apply in comparison to the competition and are considering using APOC 583,585 & 515 on future silicone projects.

BENEFITS:

The contractor not only had a great experience with our customer service, but was able to save time and money by using APOC.

“APOC 585 was superior to its competitors and how the silicone, when applied, remained white unlike its competitors”
