Green Link MetalHead support

[Back](#)

Exhibiting Company

Green Link, Incorporated

Booth Number

C7757

Name of Product

Green Link MetalHead support block

Brief Description of Product

Green Link's MetalHead is the sustainable answer to crumb rubber or polypropylene rooftop/ground mount supports for mechanical equipment, pipe, duct, conduit, walkways, and cable management. MetalHead, an anodized extruded aluminum block with a coextruded top strut channel offers multiple attachment solutions, resolves dissimilar metal challenges, and is 100% recyclable.

APPLICATION (scores 1-10) - What is the product and what does it do?

Green Link's "COVID baby" is the proud sustainable answer to crumb rubber or polypropylene rooftop/ground mount supports for mechanical equipment, pipe, duct, conduit, walkways, and cable management. MetalHead, an anodized extruded aluminum block with a coextruded top strut channel for multiple attachment solutions, also resolves dissimilar metal challenges with our stackable manifold accessory. While aluminum production has yet to become a low-/no-carbon process, one will not find a MetalHead in the landfill. The MetalHead's lifecycle outlasts the life of the roof and comes with a 20-year material warranty. MetalHeads are precious: they will be reused for the next job or are 100% recyclable. With 100 mil aluminum walls, a MetalHead weighs only 2 pounds yet withstands over 10,000 pounds of vertical compression. They are resistant to oxidation, salt spray, and mild acids. Our integrated urethane pad protects the roof membrane and therefore their warranties, and is compatible with all standard strut channel hardware. MetalHeads come standard 9.5" long x 5" high or can be customized in length, and all are fully made in the U.S.A.

INNOVATION (scores 1-20) - What is new, unique or revolutionary about the product?

Green Link's MetalHead was engineered and refined with up- and downstream lifecycle as a key design consideration, along with its extreme durability and versatility. Despite MetalHead's expensive appearance and problem-solving prowess, we remain cost-competitive, particularly when comparing the price with the cost of replacing another system in 3-5 years. Fast and easy installation, particularly with Strap 'n Strut partner accessories and its bonded "safety yellow" pad - which avoids the need to cut extra roofing membrane to protect the roof warranty - drastically reduces expensive extra roof time and effort. Once completed, a deployed MetalHead project appears very professionally done, making all associated with choosing the MetalHead for the job look very good, indeed.

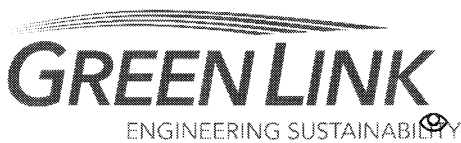

VALUE (scores 1-20) - Why would a user find this product more valuable than other similar products in the marketplace?

A user would find this product more valuable than other similar products in the marketplace because it simply is more valuable in material, design, and the options it offers to today's rooftop or ground mount support challenges. New HVAC/R products are emerging to meet efficiency and adaptability needs given a warming planet. MetalHeads, as all Green Link products, are engineered in both design and material to be second-to-none in their durability, labor-saving, functional, and aesthetic value. If bonded with Green Link Adhesive/Sealant, MetalHeads also more readily withstand extreme weather events the world increasingly endures. Clamps, rollers, elevated solutions via a threaded rod, or a molded polyurethane insert (manifold) which keeps pipes and conduit in place but separated, the options are many in keeping contractor projects on-time and under-budget.

MARKET IMPACT (scores 1-10) - How will the product influence or change future product development in the field?

The priority of 'doing no harm' environmentally is no longer a luxury, but rather an imperative for every facet of our economy. Green Link does our best to minimize our carbon footprint while providing a long-lasting, valuable product. All designs must consider sustainability, producing more efficiently and more

cleanly, as we necessarily eradicate anthropogenic greenhouse gases from our atmosphere. The MetalHead handsomely serves as high-value equipment and rooftop/ground-mounted asset support in keeping with our updated logo tagline: "Green Link - Engineering Sustainability."
